

LAB 02

NAME: MANASVI GV

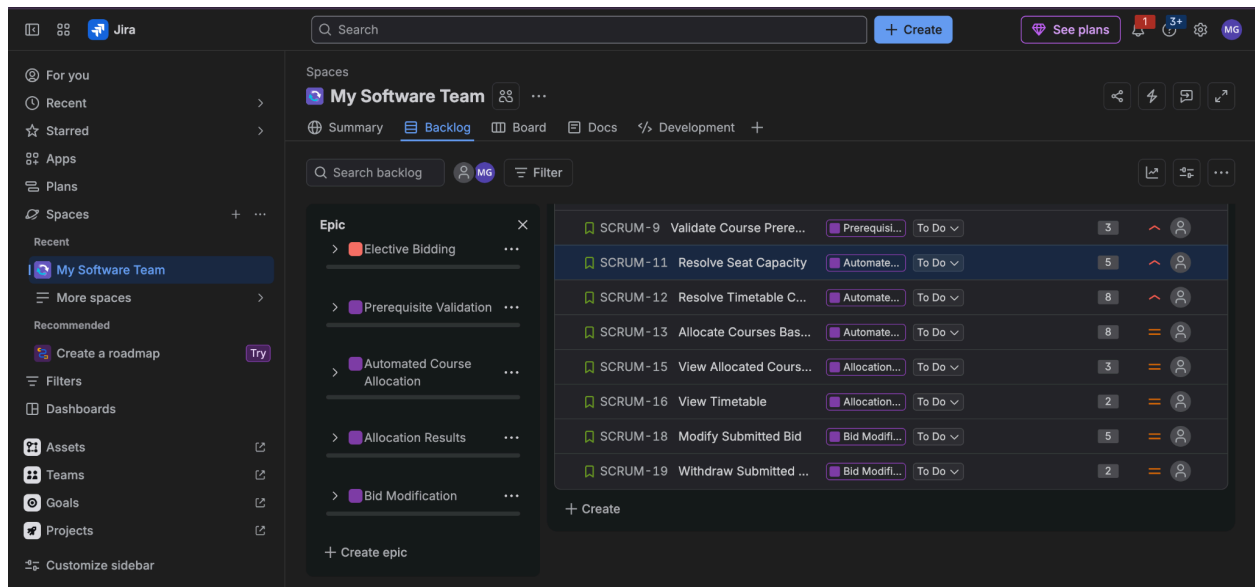

SRN: PES1UG24AM156

SECTION: 5 'C'

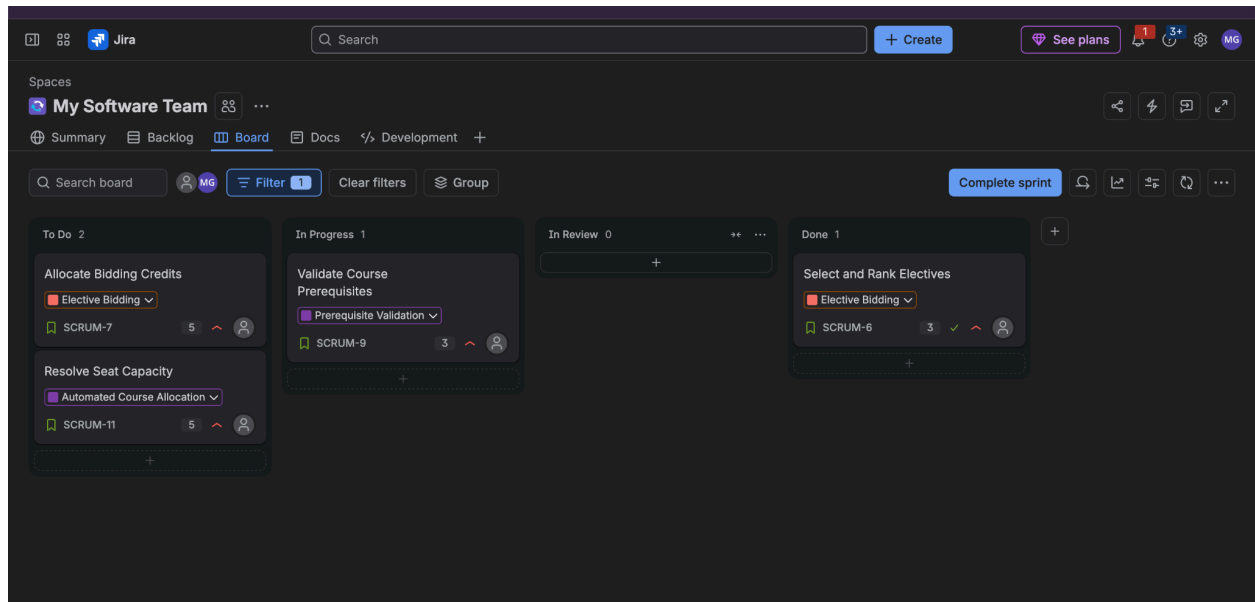

1. Jira backlog with Epics and User Stories.

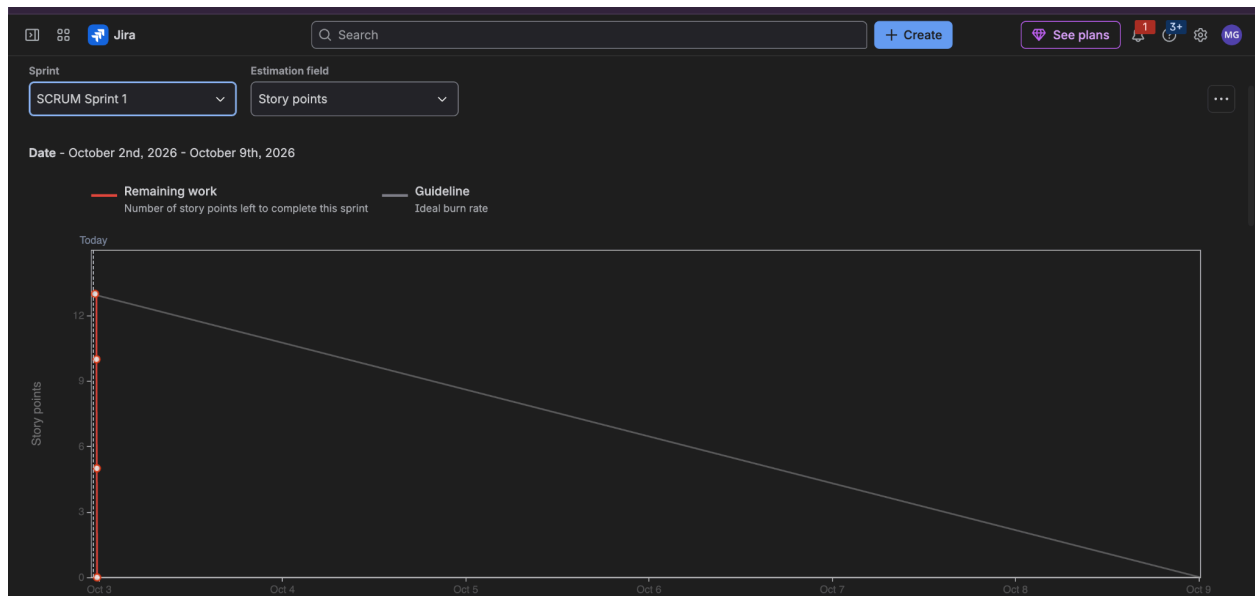

2. Story point assignments

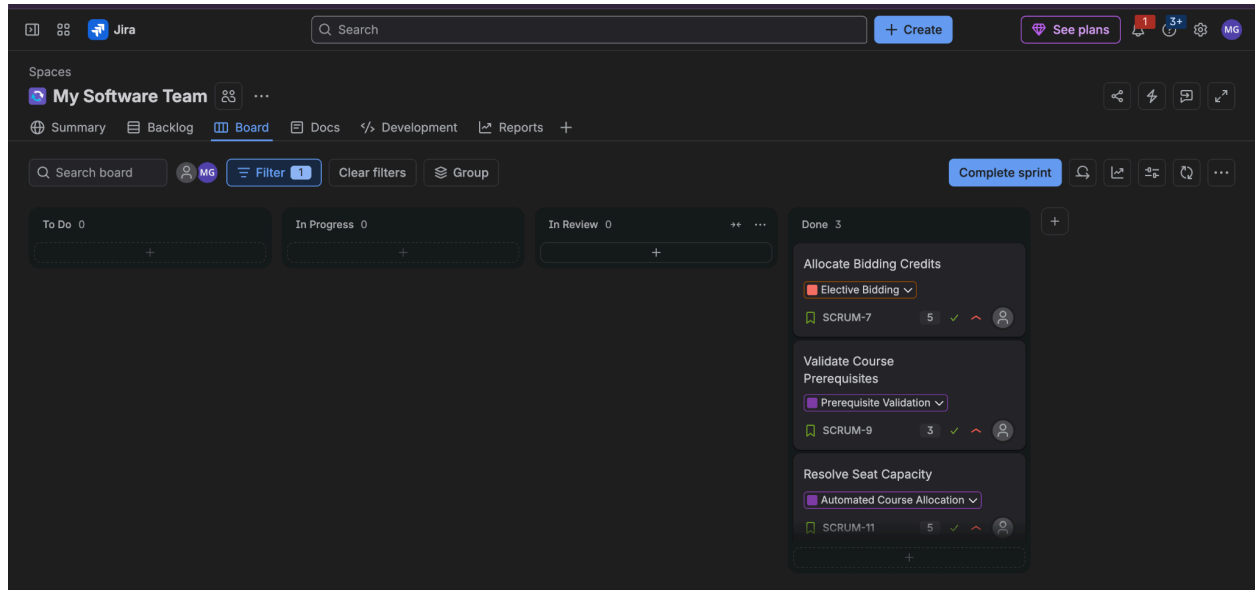

3. Sprint board (Active Sprint view).

4. Burndown Chart

REFLECTION QUESTIONS

1. Did your estimations reflect the actual effort?

Yes, the story point estimates reasonably reflected the effort required for the tasks. The sprint1 had a total of 13 story points, distributed as 5, 3, and 5 points. The tasks were completed successfully, suggesting that the estimates were reasonably appropriate for the simulated sprint.

2. Was your backlog well-prioritized?

Yes, the backlog was organized according to the importance and dependency of the tasks. Higher-priority tasks related to prerequisites, bidding, and seat allocation were included in the sprint, allowing the team to focus on the key functionality first.

3. How did your simulated sprint align with your plan?

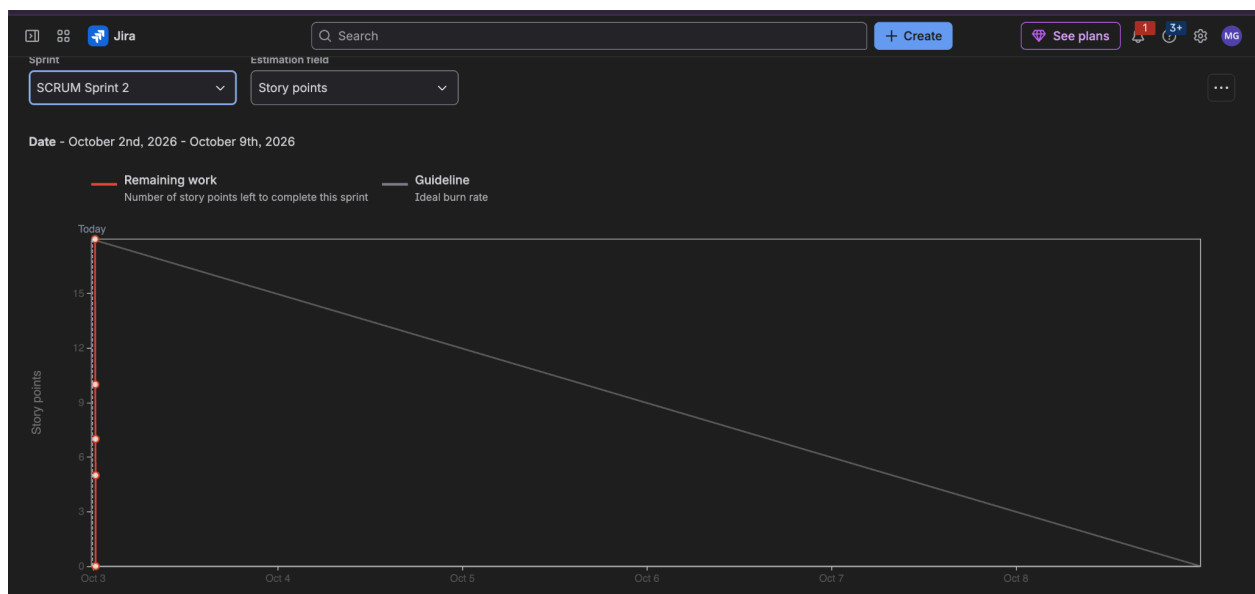

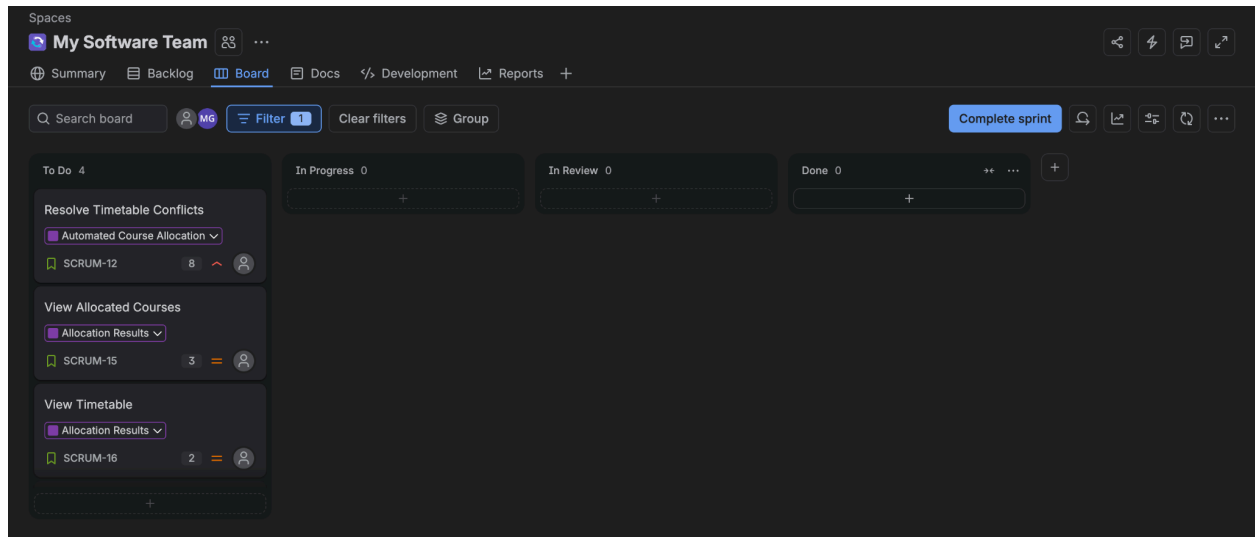

The simulated sprint aligned well with the plan because the selected tasks were completed within the sprint. The team moved the work through To Do → In Progress → Done, allowing the progress of each task to be tracked clearly.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that the team started with 13 story points and eventually reduced the remaining work to 0 points. This indicates that the team was able to complete all the planned work in the simulated sprint. However, since this was only one simulated sprint, more sprints would be needed to establish a reliable long-term team velocity or capacity.

Since the handout mentioned 2 sprints

Sprint 2 is 18 pts
